

## John Boehmler

### **Consolidating and Securing Branch Networks with the SD Branch**

Adapting a security-driven networking philosophy to small Branch Office deployments is long overdue. Separate WAN Access, Wired, Wireless and Security Services that are not integrated pose an unnecessary cybersecurity risk that can be easily mitigated with the right approach. Participants will discover how this next generation of convergence which includes Security, Wide Area Networking and Local Area Networking can help their companies reduce risk, save money and eliminate unnecessary complexity.

### **Biography**

John is a tenured technical professional with certifications that include Fortinet NSE8 and Cisco CCIE amongst others. He has a proven record of evangelizing and applying technology to help companies of all sizes meet their business objectives. He is a trusted advisor, architect and instructor.
