Fernando Cruchaga

The Art of Deceiving: How Deception Technology Enhances Cybersecurity

Visit this session to learn how security teams can be proactive against cyberthreats by leveraging advanced deception technology to bait your adversary and turn the table on them. Deception technology implements denial, deception, and adversary engagement into an organization's current cyber strategy for managing risk. Zscaler Deception aligns to MITRE Engage™, which seeks to help CISOs and other security decision makers understand how denial, deception, and adversary engagement fit into their organization's current cyber strategy. Zscaler Deception makes it easy and fast to detect, understand, and contain attackers who have bypassed other security tools.

Biography

Fernando Cruchaga is a Zscaler Senior Solutions Engineer focusing on Deception technology. He has over 30 years experience in the Information Technology Space with a focus on Cyber Security for the last 15 years and the last 6 specializing the Deception space to help companies detect and respond to reduce dwell time of adversaries.
