Driving Cybersecurity Excellence in e-Government: Protecting Delaware's Critical Systems

Join us for an informative session on securing e-government services, safeguarding Delaware's citizens' data, and fortifying government processes. Learn about tactics used by threat actors, including APTs, and cost-effective strategies to reduce risk across the state. This non-technical talk, designed for executives, provides accessible insights and real-world examples. Discover the importance of proactive cybersecurity measures and gain practical strategies to strengthen e-government security and protect citizens. Q&A participation encouraged.

Biography

Sam, a security veteran with 23+ years of experience, specializes in constructing robust defensive systems for critical applications.
