Top 10 Things You Can Do to Stay Out of the News!

Technical Track: Intermediate

Companies are being breached at an alarming rate. While some attacks have gotten more advanced, most are taking advantage of obscure default settings and simple misconfigurations to gain access to your network and escalate privileges.

This talk will focus on the top security controls that can be implemented at low cost and low impact to your network, ensuring maximum ROI of your Domain Admins valuable time. Missing this talk could mean risking your company's reputation.

Biography

Matt Barnett is a security consultant with diverse experience in network and infrastructure architecture, Linux system administration, application development, and database administration. Matt's focus at BTB is primarily on security assessments, including penetration testing, application assessments, vulnerability assessments, network architecture assessments, regulatory reviews, and risk assessments. Through these assessments, Matt identifies high-risk areas and associated root causes for the client and develops tailored recommendations for the environment.

David Williams is a security professional with over 11 years of experience in Information Technology, Security, and associated training. David joined BTB Security after managing a team of 17 penetration testers for a multi-million dollar revenue penetration test lab. David has evaluated Fortune 500, Financial Organizations, and Cloud Service Providers. He has held numerous positions on both the defensive and offensive side of security, which have allowed him to holistically evaluate an organization based on tailored concepts that meet current security trends and customer needs.
