Changing Legal Landscape in Cybersecurity: Implications for Business Technical Track: Beginner

Recent Executive Orders, laws and regulations on cybersecurity continue to transform a company's cybersecurity responsibilities. Companies now have greater risk of liability if unprepared for a cyber attack. This session will update you on the latest developments, review the current and upcoming regulatory landscape, and discuss the implications for businesses as they seek to protect their critical infrastructure and comply with laws and regulations for data protection.

Biography

Mr. Denny practices primarily in the areas of electronic commerce, information licensing, and commercial litigation. He has represented both public and privately held companies in a wide range of technology and intellectual property-related transactions, including outsourcing of IT services, mergers and acquisitions, technology licensing, software development, sales of Internet domain names, and the development of ecommerce on Web sites. Clients include major licensees of information technology as well as Internet service providers, software developers and system integration service providers.

Mr. Denny has litigated disputes over the interpretation and enforcement of many types of technology contracts, general commercial contracts and liability insurance policies; he has tried jury and non-jury cases in federal and state trial and appellate courts, before arbitration panels, and by use of other alternative dispute resolution techniques.
