

# Roberto Rodriguez

## **Learn how to build a Cybersecurity Force Field for your Business**

### **Technical Track: Intermediate**

Every day, more businesses are becoming targets and victims of cyber-crimes. Attacks are increasing in count and sophistication and threats are outpacing many companies' resources or in-house expertise, creating a growing security gap.

In this breakout Roberto A. Rodriguez, Head HumanFirewall will demonstrate how to turn the tables on cyber attackers by building a cybersecurity force field for your business forcing the hackers move on to lesser fortified, easier targets.

Mr. Rodriguez will discuss the five components necessary to shield your business from cyberattack. He will demonstrate the importance of each component and provide true life examples of cybersecurity force fields in action.

This breakout session is a must for everyone wants a strong security posture for their business!

### **Biography**

Roberto Rodriguez was born in Miami, Florida but was raised in Lima, Peru. He has his Bachelor's degree in Computer Network Security and is currently pursuing a Master's in Information Assurance from Wilmington University.

Roberto began his career as a Systems Engineer with MySherpa, a Delaware based IT company. There he set the security baseline for the company, enhanced the security policies, and developed a high impact security awareness program which reduced the risk of getting compromised from a phishing attack.

He is now employed by DuPont as a member of the Cyber Security Incident Response Team where he protects the company's secrets from advanced Cyber-attacks. Additionally, Roberto is the founder of HumanFirewalls, a cyber-security business, whose main goal is to reinforce security concepts to ultimately alter risky behaviors and to reduce the possibility of getting compromised by providing complete network visibility and continuous monitoring services to companies in Delaware.
