Moving the Enterprise to the Cloud

Technical Track: Beginner

As organizations consider moving their applications, infrastructure, systems and data to the cloud, Information Security professionals are now facing a different set of challenges. InfoSec leaders must work closely with the business to understand their objectives and to enable the goals of the enterprise. The days of protecting the perimeter are far behind us. This session will discuss the necessary steps to align with the business while retaining the same level of protections that traditional on-premise controls have afforded enterprises to date.

Biography

Anahi Santiago is the Chief Information Security Officer at Christiana Care Health System, one of the country's largest healthcare providers.

Anahi has overall responsibility for the organization's information security program. She leads a team of information security professionals in supporting Christiana's strategic initiatives by managing risks, implementing policies and controls, and generating overall awareness.

Anahi holds a BS in electrical and computer engineering as well as an executive MBA from Drexel University.
