

Rob Younce

Information Security Current State A report from the Battlefield

Technical Track: Advanced

Have you ever wondered how your information security practices really measure up against your peers? As part of Protiviti IT consulting services, the Security & Privacy team performs a litany of IT, information security and privacy capability assessments throughout the Fortune 1000, driven by risk and maturity, etc. In review of twenty-five assessments, some of the most interesting themes and trends would not surprise most technologists, but may surprise business and information security leaders. Some of the largest trends stem from a lack of transparency of whether IT can effectively manage security. Although it is not all doom and gloom in the security industry just yet, however there is a lot of work that must be done to continue to enhance security into a business community practice for all companies. As I walk through these trends, think about how your leadership, managers, and analysts are influenced by the content of this presentation.
