Jake Ruddy

Email, the easiest way to breach your security

Email is one of the fastest ways to share thoughts, pictures, and documents in the world of business. Unfortunately, email was never designed to be secure. Today cyber thieves are leveraging the power of email to gain access to remote systems, deploy ransomware, and steal credentials. They are using phishing, whaling, and social engineering to trick users into bypassing security.

Learn about some of the current trends, identify some tools for training, and discuss how to prevent this from happening to you.

Biography

Jake Ruddy was born in London, Ontario, Canada and moved to Delaware in 1999 for a 1-year contract job. That same year, he met his wife, Kyrianna, resulting in a marriage of 17 years.

Jake's passion for technology started at a very young age. He spent much of his youth building computers, networks and learning about computers. He spent the last 20 years supporting businesses in various roles including networking, systems administration and consulting.

From 2002 to 2007, he operated a small IT support firm servicing residential clients and small businesses. In 2007, he merged his company with PCS.

Today, he is the President of Delaware and Maryland for PCS and focuses on assisting businesses to maximize their use of technology. PCS employs 105 partners and has four offices serving NJ, PA, DE, MD and

Washington, D.C. PCS offers a wide range of services ranging from consulting to out-sourced IT support and managed services.
