Dan Goodman

Sometimes the Little Phish is the Best Catch

When it comes to phishing, small businesses are not only easier to exploit, but sometimes the value is greater than breaching a fortune 500 business. With a lack of training, feelings of humiliation, and fear of consequences, small business employees are more likely to be victim to phishing, and far less likely to report these attempts whether successful or not. In this presentation we will discuss how you can best prepare your business for the phishing epidemic.

Biography
