KEY POINTS

- The ideal target is one who is the least technical and has the most valuable access/information. Identify who these individuals might be in your business.

- An Acceptable Use Policy is one of the first steps you can take to document preferred tactics to defend against social engineering

- Although Education for end users is important, you must combine that with the patching of software and systems.

- Motivate your employees to keep your business secure, they will be far more likely to receive and apply security training.
