

DTI e-Security News — SCHOOL IS OUT, BUT SECURITY IS NOT Edition

SCHOOL IS OUT, BUT SECURITY IS NOT

So you have made it through another school year, perhaps you have graduated and are on your way to celebrate via a vacation. That is great!!! You have decided to head out on a classic summer road trip and drive for some parts of your vacation.

Though the fuel prices are lower than previous years, the risk of skimming credit cards at the gas stations is not. Have you also noticed the convenient ways you can pay outside?

The next time you fill up, take a good look at the pump, especially the credit card unit. If it looks battered or scarred, it may be compromised with a skimmer device intended to steal your credit card information.

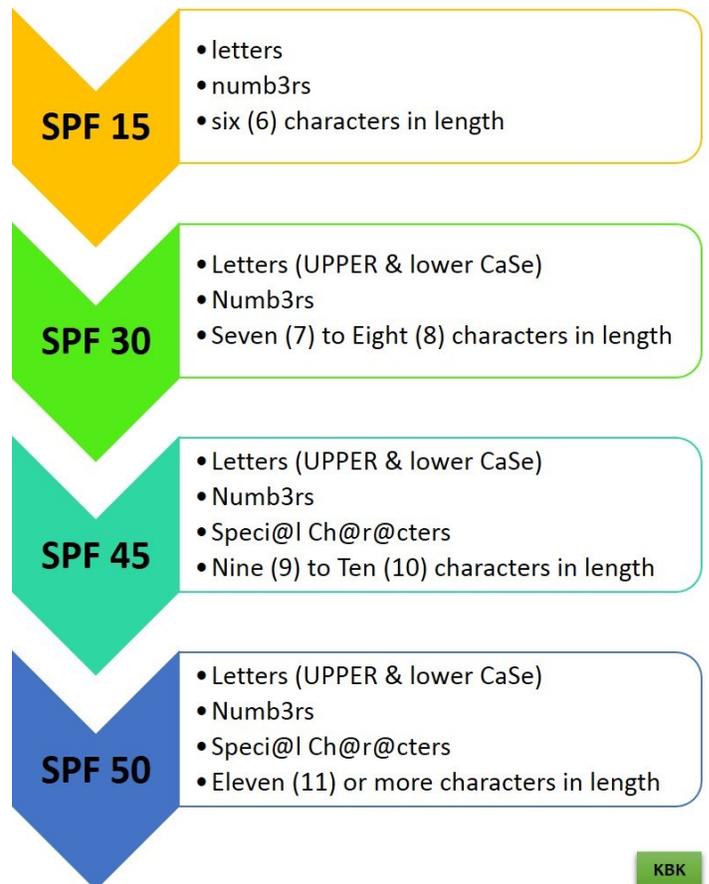

Look for a security seal across the opening of the credit card door. If the seal is broken, move on to the next pump or station.

While we appreciate the convenience of paying at the pump, so do thieves because skimming gas station credit card readers is a common way to steal your card information.

Another good option is to take your transaction inside or pay the old fashioned way...with cash!

WHAT'S YOUR S.P.F?

SPF is more than just for sunscreen, have you ever heard the acronym and thought, Strong Password Factor? If not, it is not too late to see how your password rates on the SPF scale below.
